

Plate III · Carrot and robin · *Daucus carota, Erithacus rubecula*

March 2027

This month

A lot of outdoor sowing begins in the south this month: carrots, beetroot, parsnips, lettuce, peas. Early potatoes can be planted down south. The north list says April for those potatoes. Tomatoes can be sown under cover in the south. If the soil sticks to your boots, wait a few days.

Mon	*Tue*	*Wed*	*Thu*	*Fri*	*Sat*	*Sun*
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26 *Good Friday*	27	28
29 *Easter Monday*	30	31				

Through the month

Sow under cover: summer cabbage, brussels sprouts, broad beans, and others. Some are later, or absent, on the north list.

Sow outside: carrots, beetroot, parsnips, and others. Some are later, or absent, on the north list.

Plant out: early potatoes, onion sets, mint. Some are later, or absent, on the north list.

Harvest: kale, leeks.

Birds: boxes are better up now. Keep whole peanuts in a mesh feeder.

Jobs run through the month. They are not pinned to one day. Crop pages give the north and south ranges.

South: southern England, the Midlands and much of Wales. North: northern England and Scotland. Ranges, not a forecast. Bank holidays shown are England and Wales.
